

Pickleball Specific Git Pages/APIs

[5urabhi/Pickle_ball_tracking · GitHub](#) - more precise ball tracking?

This project utilizes advanced computer vision techniques to track a pickleball during gameplay, determining both the bounce status of the ball (bounced or not) and its position relative to the court boundaries (in or out). It employs a combination of libraries including OpenCV, Matplotlib, Ultralytics, NumPy, Pandas, and FilterPy to analyze video footage of pickleball games, providing valuable insights for players, coaches, and enthusiasts.

[kpp91302/Pickleball-Analytics · GitHub](#) - MAIN

A computer vision pipeline for analyzing pickleball gameplay videos using deep learning. This tool detects players, ball position, and court layout in each frame to generate rich visual analytics, including heatmaps, rally tempo, and kitchen zone usage. Outputs are compiled into a composite video with multiple synchronized views.

[Pickleball paddle tracker · GitHub](#) - Hardware

This project is built in arduino cloud in order to track your pickleball paddle live while you play.

[GitHub - AndrewDettor/TrackNet-Pickleball: Deep Learning model to track a pickleball's location in a video of a match](#)

Model is able to give detailed statistics on ball velocity, shot type, location

<https://universe.roboflow.com/gamechangerv1/pickleball-detection-1oqlw/browse?queryText&pageSize=50&startIndex=0&browseQuery=true>

API

[Pickleball Vision: CV-Driven Match Analytics · Ryan Tolone](#)

A computer-vision pipeline that turns a fixed-camera pickleball clip into an annotated video with player tracking, ball tracking, court geometry, top-down minimap, and per-frame analytics — ball speed, player speed/distance, shot count. YOLOv8 + a fine-tuned ResNet50 court keypoint regressor + iterative homography refinement.

Other Gits

[bradautomates/claude-video: Give Claude the ability to watch any video. /watch downloads, extracts frames, transcribes, hands it all to Claude. · GitHub](#)
